

FOR IMMEDIATE RELEASE

Inmagic Announces ChemRisk is Implementing Its *Genie Express* Catalog Application

(Woburn, MA – April 13, 2006) Inmagic, Inc., the global leader in enterprise research asset management applications, today announced that ChemRisk® has selected Inmagic® *Genie Express* to create a global shared document repository. *(For more information on Genie Express, see Inmagic's April 13, 2006 press release announcing it.)*

ChemRisk is a consulting firm that provides environmental sciences and life sciences services to organizations around the world. "Over the years ChemRisk has developed a considerable amount of intellectual property associated with our consulting work," stated John Warmerdam, Supervising Health Scientist at ChemRisk. "*Genie Express* will assemble this critical information as a shared web-based document repository, allow additional documents to be added to the system from any of our global offices, and speed staff access to this information, helping ChemRisk to better serve its customers."

"Improving our customers' ability to manage and share critical information assets is Inmagic's mission," said Phillip L. Green, Inmagic's President and CEO. "To accomplish this objective, Inmagic has developed a comprehensive product line - including *Genie Express* - to meet our customers' research asset management needs. We also partner with our customers (including ChemRisk) on implementation, to ensure rapid deployment and a successful rollout of the system."

Genie Express makes it possible to create custom web-based catalogs for virtually any type of information resource: documents, image archives, news, URLs, etc. Using *Genie Express*, Inmagic customers can create indexes of both bibliographic and full text information, in order to deploy powerful custom research and knowledge sharing solutions.

About ChemRisk

ChemRisk is a consulting firm providing state-of-the-art toxicology, industrial hygiene, epidemiology, and risk assessment services to organizations that confront public health, occupational health, and environmental challenges

About Inmagic

Inmagic, Inc. is the global leader in enterprise Research Asset Management. Inmagic's solutions are uniquely capable of organizing diverse sets of research materials and enabling our customers to gain extraordinary insights from them. Inmagic solutions are known for their flexibility, ease of use and deployment, and minimal need for information technology support. Because they are based on Microsoft® SQL Server™ and .NET technology that utilizes Web services, Inmagic applications can be integrated with and interoperate within an organization's overall information technology infrastructure.
