

INMAGIC®

FOR IMMEDIATE RELEASE

Inmagic and WebFeat Partner to Provide Inmagic® *Presto* Customers with Federated Search Capabilities

American Library Association Midwinter Meeting, Seattle, WA (January 19, 2007) – Inmagic, Inc., the global leader in enterprise Research Asset Management, and WebFeat, the global leader in federated searching, today announced at the ALA Midwinter Meeting a partnership that will enable Inmagic® *Presto* customers to conduct federated searches across virtually unlimited external data sources.

Inmagic® *Presto* is a Web-based enterprise application that enables organizations to provide authorized end users with immediate and consolidated access to the right information, even when it appears in varied formats and multiple locations across and outside of the organization. As a result, professionals spend more time on the strategic and creative initiatives that drive their organization's success, and less time digging for information from virtual (Office documents, PDFs, audio, video, images, URLs) and physical (books, serials) information assets. *Presto* enables end users to both search full text and browse, in order to efficiently access critical information.

WebFeat users can simultaneously search across unlimited numbers of resources from a single intuitive interface. WebFeat's patented translator authentication and session management technology enables WebFeat to search virtually any searchable database – a feature unique to WebFeat. WebFeat maintains a library of over 6,000 database translators – the industry's largest. WebFeat provides a truly no-hassle implementation and configuration process as it proactively and reactively updates and upgrades translators as necessary. These actions are all completely transparent to information center staff and users.

"WebFeat's ability to search thousands of disparate external data sources is an excellent complement to *Presto's* categorization and search of numerous highly-varied internal data sources," commented Lourdes Engel, Inmagic's Vice President of Engineering. "By partnering with WebFeat to make this capability available to *Presto* customers on a subscription basis, we maximize the number of external sources that our *Presto* customers can search and organize in order to manage their relevant information."

"Adding the consolidated external content offered by WebFeat to the internal content managed by *Presto* results in a very exciting information offering," noted Todd Miller, President of WebFeat.
